

Pesticides & Public Health

By controlling disease-carrying rodents, insects, algae, bacteria and weeds pesticides help municipalities provide....

- clean schools and cafeterias
- sanitary hospitals
- safe swimming pools
- healthy lawns

Do you have questions about pesticides?

Visit our website at www.urbanpestmanagement.ca to learn more or contact us for a free copy of The Quick Reference Guide for Municipal Decision Makers.

Health Canada registers pest control products for use in municipalities. Only products that pose no unacceptable human health or environmental risk are registered for sale. Federal assessments take into consideration product usage around schoolyards, small children and pregnant women. The federal government recently modernized the regulation of pesticides. The new Pest Control Products Act will better safeguard Canadians - especially children - from health and environment risks. Call us to learn more about this important change in pesticide legislation.
